Framework to Intensify Interventions

4

Table 1. Summary of Meta-Analyses Regarding Cognitive Processes and Academic Interventions

STUDY	DESCRIPTION	<i>k</i>	<i>d</i>
Burns et al. (in press)	Academic interventions from cognitive processing measures	37	0.17
Kearns & Fuchs (2013)*	Academic outcomes of cognitively focused intervention	34	0.44
	Matched to cognitive deficits	5	0.48
	Compared to no intervention	11	0.58
Melby-Lervag & Hulme, (2013)	Compared to academic interventions	34	0.26
	Working memory training and academic outcomes	8	0.11
	Mathematics	7	0.07
Scholin & Burns (2012)	Decoding	7	0.13
	Verbal ability (comprehension)	8	0.13
Scholm & Burns (2012)	Predicting response to intervention for reading with IQ	18	0.27
Stuebing et al. (2009)	Relationship between IQ and academic outcomes	22	0.32
Stuebing et al. (2015)	Cognitive characteristics and response to intervention	54	0.46
	Baseline characteristics and growth curves	36	0.65
	Baseline characteristics and gain scores	30	0.43
	Baseline characteristics and posttest	54	0.30
Schwaighofer et al. (2015)	Near and far transfers for working memory training	47	0.15
	Mathematics	15	0.09
	Decoding	14	0.15
	Verbal ability (comprehension)	29	0.21
Total		203	0.27

* One effect was identified as an outlier by Kearns and Fuchs (2013) and was removed.

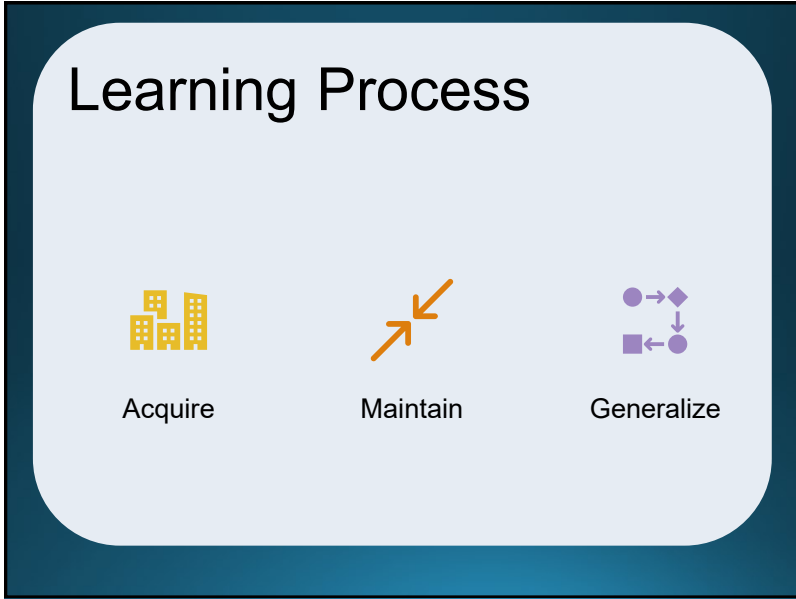

5

Instructional Hierarchy: Stages of Learning

	Acquisition	Proficiency	Generalization	Adaption
Learning Hierarchy	■ Slow and inaccurate	■ Accurate but slow	■ Can apply to novel setting	■ Can use information to solve problems
Instructional Hierarchy	■ Modeling ■ Explicit instruction ■ Immediate corrective feedback	■ Novel practice opportunities ■ Independent practice ■ Timings ■ Immediate feedback	■ Discrimination training ■ Differentiation training	■ Problem solving ■ Simulations

Haring, N. G., & Eaton, M. D. (1978). Systematic instructional procedures: An instructional hierarchy. In N. G. Haring, T. C. Lovitt, M. D. Eaton, & C. L. Hansen (Eds.) *The fourth R: Research in the classroom* (pp. 23-40). Columbus, OH: Charles E. Merrill.

8

Table 2. Strategies for Intervention Intensification (Fuchs et al., 2017) and Phases of Learning

INTENSIFICATION STRATEGY	DEFINITION	MOST APPROPRIATE PHASE IN LEARNING HIERARCHY
Dosage	Number of intervention sessions each week, number of minutes and opportunities to respond in each session, and the size of the intervention group.	<i>Fluency building</i> -A student in the fluency-building phase of learning might complete the task accurately, but then not retain it the next day. Increasing dosage helps with retaining newly learned information.
Alignment for Acquisition	Intervention adequately addresses skills that the student has yet to learn while incorporating a meaningful focus on grade-appropriate standards, but does not address skills that the student has already mastered.	
Transfer for Generalization	Explicitly teaching how to transfer the skill to other forms and contexts, and to realize the connections between mastered and new skills.	<i>Acquisition</i> -Assess reading comprehension, fluency, decoding, and phonemic awareness to identify the most fundamental skill in which the student needs support and those that have already been mastered. The intervention is then matched to the skill for which the student needs support to facilitate better initial learning. <i>Generalization</i> -Providing opportunities to practice the skill across different contexts and situations enhances generalization of the skill.
Comprehensiveness for Acquisition	Including components of direct instruction such as using simple and direct language, increasing modeling of the skill, building background knowledge before teaching, and incorporating systematic cumulative reviews.	<i>Acquisition</i> -Modeling and explicit instruction are strategies appropriate for the acquisition phase of learning.

9

Problem Analysis

At the end of the lesson, can the kid do it? (Learn it in the first place?)

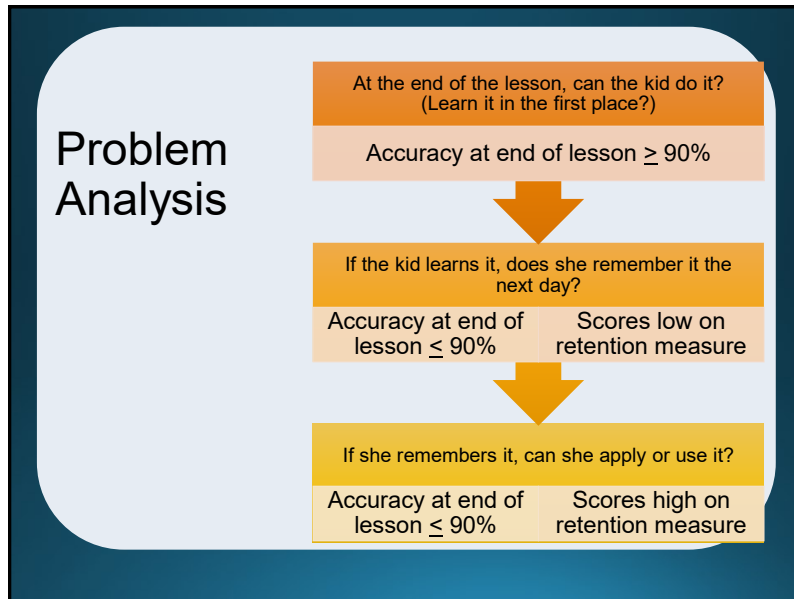

If the kid learns it, does she remember it the next day?

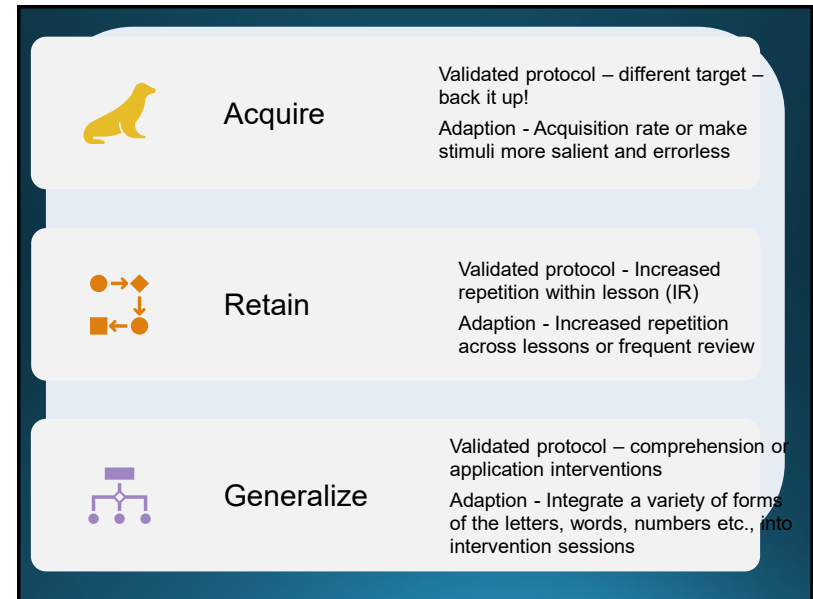

If she remembers it, can she apply or use it?

10

11

12

Acquire –
Not
learning it

Math
**Conceptual
 Understanding**

17

Please use the dots below the two problems to decide which of the two problems is right and circle the math problem that is right

1. $2 + 4 = 6$

$2 + 4 = 8$

2. $4 + 1 = 7$

$4 + 1 = 5$

3. $6 + 3 = 11$

$6 + 3 = 9$

4. $5 + 2 = 7$

$5 + 2 = 9$

5. $4 + 6 = 8$

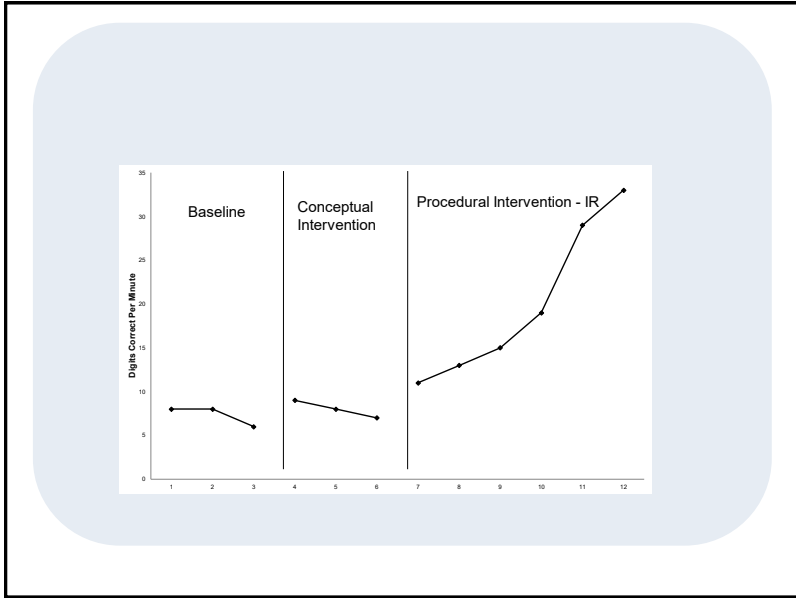

$4 + 6 = 10$

6. $3 + 2 = 5$

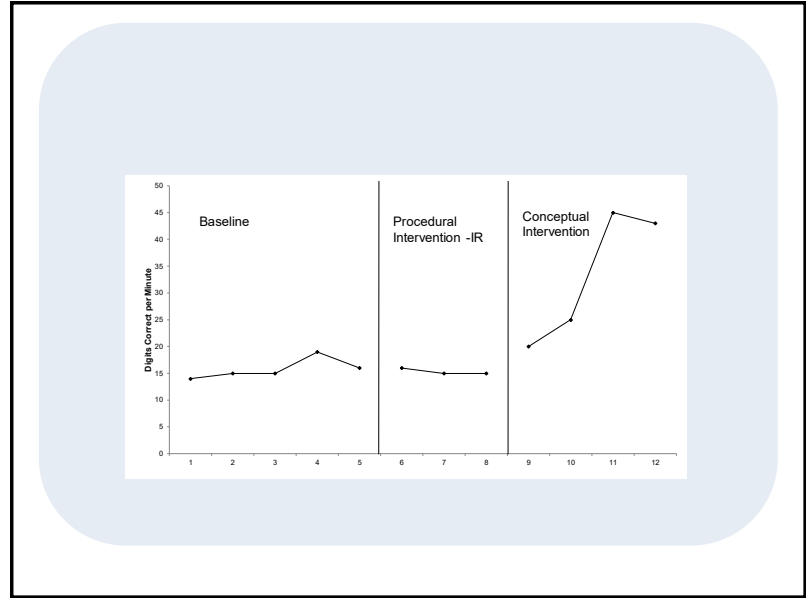

$3 + 2 = 7$

18

19

20

TABLE 2 Definitions of mathematical strands of proficiency

Strands of proficiency	Intervention criterion
Conceptual understanding	Fosters the developmental knowledge of relationships and ideas related to the problem.
Procedural knowledge	Fosters the developmental understanding of the rote steps needed to solve a problem.
Strategic competence	Fosters the development of learning to solve problems using multiple strategies.
Adaptive reasoning	Fosters the development of learning to justify the correct answer and demonstrate reasoning.
Productive disposition	Fosters the development of viewing mathematics as useful and worthwhile, while increasing students' confidence.

21

TABLE 3 Application of mathematical proficiency strands to mathematical interventions

Intervention	Mathematical proficiency strands				Productive disposition
	Conceptual understanding	Procedural knowledge	Strategic competence	Adaptive reasoning

Taped problems		X			
Think alouds	X			X	

22

•Decoding rather than fluency? PA rather than decoding?

•Within domain?

- Easier text
- Decoding inventory
- Math objective

23

Acquire – Not learning it in the first place

Validated Program –
Right Target

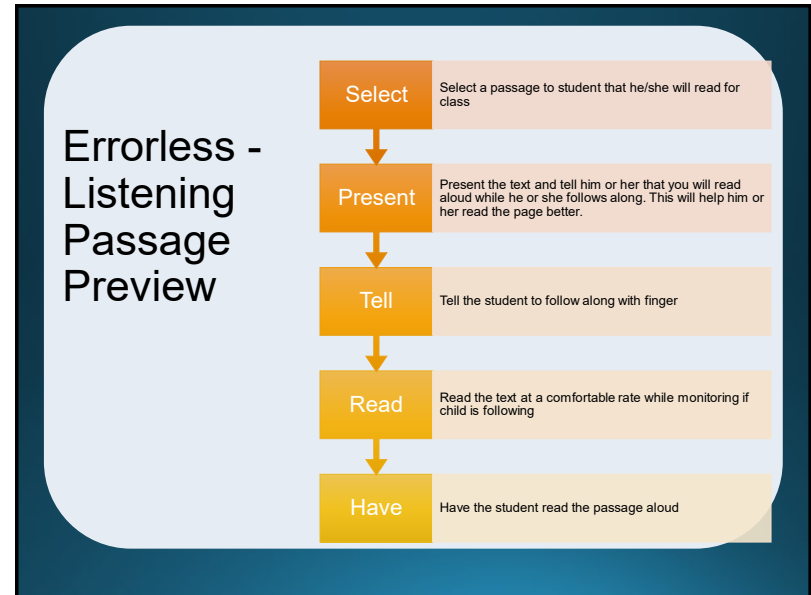

Modification –
Errorless and Salient

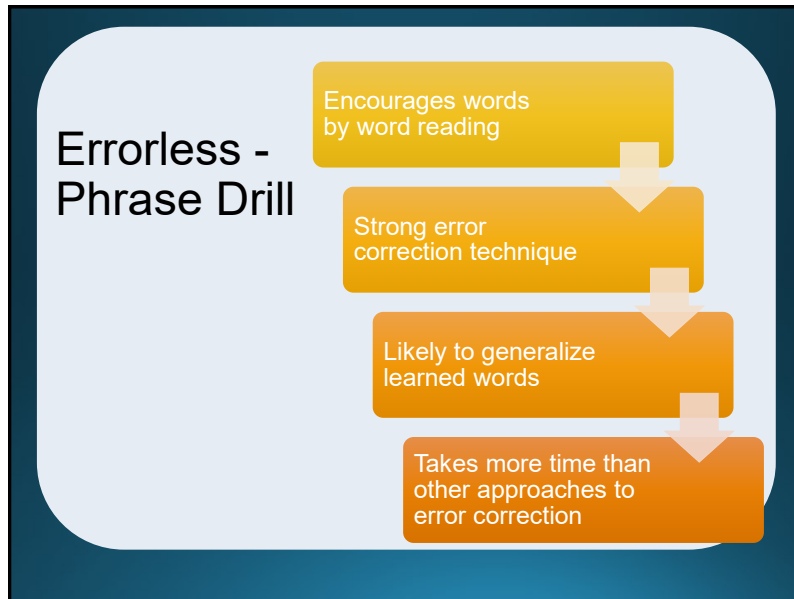

24

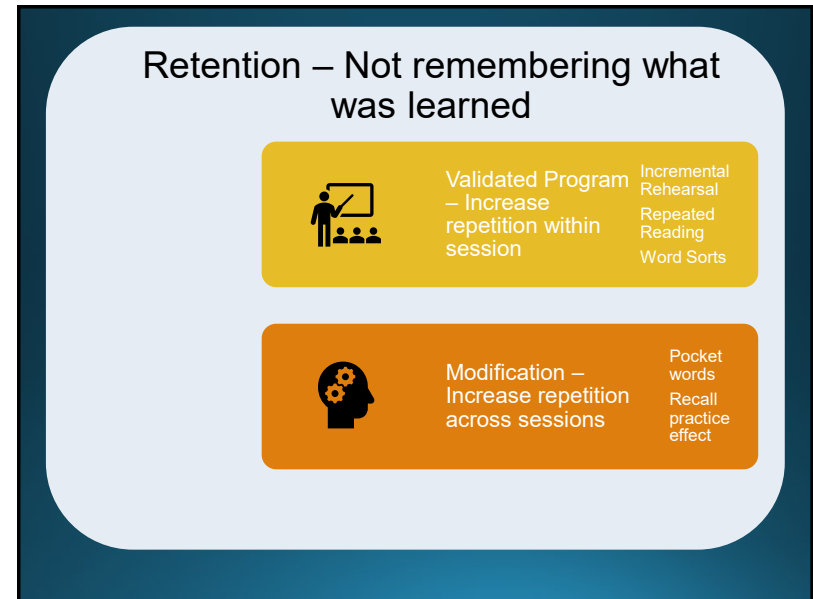

25

26

27

28

Incremental Rehearsal

- Developed by Dr. James Tucker (1989)
- Folding in technique
- Rehearses one new item at a time
- Uses instructional level and high repetition

29

Mean Number of Word Retained

30

Incremental Rehearsal Effectiveness

32

Repeated Readings

-  One of the oldest and most well-researched interventions
-  High OTR
-  Generalizes to passage and similar ones

33

Repeated Reading

Objective: To increase fluent reading on passages for students who

- read with high accuracy
- show benefit from repeated practice on the same passage

Materials: 2 copies each of texts that the student can read with at least 95% accuracy
 Stop-watch
 Pencil/pen for teacher to mark errors

34

Sequence:

1. Teacher explains that students will be reading a passage multiple times to work on increasing fluency (fluency is rate and accuracy and expression – not just speed)
2. Teacher gives copies of passages to student
3. (Optional Step) Student whisper reads passage to him/herself while tracking with his/her finger to figure out unknown words. Students may ask about any unknown words.
4. Teacher explains that for the first reading out-loud, the student will read for 1 minute.
5. Teacher says “Begin” (not “Start”) and starts stop-watch.
6. Student reads passage out-loud.
7. Teacher marks errors and monitors stopwatch. At one minute, teacher says “Stop” and marks the last word read by the student.
8. Teacher records number of correct words per minute and graphs results, showing the graph to the student.
9. Teacher provides standard error correction for each word the student read in error. (“That word is _____. What word?” The student repeats the word. Teacher says, “Yes. That word is _____.” Student goes back to the beginning of the sentence to begin again.)
10. Repeat steps 5-9 at least two more times for a minimum of 3 timed readings (student reads, teacher times, words read correctly are recorded, and errors are corrected). Additional repetitions may be completed if student’s fluency continues to improve through these readings.

35

36

37

Three icons are arranged horizontally. From left to right: a blue icon of a stack of three books, a blue checkmark icon, and a blue icon of a document with a folded corner and horizontal lines representing text.

Increase number of reads for repeated reading

More examples in word sorts

More items in C-C-C and practice sheets

38

Retention –
Not remembering what was learned

Validated Program – Increase repetition within session

- Incremental Rehearsal
- Repeated Reading
- Word Sorts

Modification – Increase repetition across sessions

- Pocket words
- Recall practice effect

39

Retention Intervention

-  Short sessions
-  Twice per day
-  Test retention at the end of each day
-  Start with review

40

Generalization – Not applying what was learned

	Validated Program	Concept Map Reciprocal Teaching Schema-based Instruction
	Modification – Teach how you want them to use it	

41

Comprehension is affected by

- 1 & 2) Background knowledge and vocabulary
- 3) Correct inferences about reading
- 4) Word reading skill
- 5) Strategy use
(Cromley & Azevedo, 2007)

42

43

Say-Ask-Check (Montague, 1992)

Steps	Prompt Sample
1. Read	I will read the problem and reread what I don't understand. Do I fully understand it?
2. Paraphrase	I will highlight key words and restate it in my own words. Did I highlight the most important words?
3. Draw	I will draw a picture of the problem. Does the drawing contain the important parts?
4. Plan	I will make a plan to solve the problem. What is the first step? What is the second step?
5. Predict	I will predict what I think the answer is. What numbers should be used to estimate?
6. Compute	I will compute the answer. Does my answer sound right?
7. Check	I will check the steps of my answer. Did I go through each step and check my work?

44

CASE # 4

Name: Christine
 Grade: Fourth
 Gender: Female
 Race/Ethnicity: White
 Reason for referral: Christine was referred due to reported difficulties with reading. Her most recent screeners (Aimsweb and Star) were all below benchmark criteria. Her teacher reported difficulty with reading comprehension, but decoding and fluency were rated as acceptable.

Diagnostic Data: Aimsweb R-CBM = 15 words per minute
 Accuracy = 15 out of 20 (75%)
 STAR Reading = 10th percentile
 DIBELS NWF = 40 out of 52 (goal = 56) (77%)
 Phonemic Awareness subtest of CTOPP = SS 98 (45th percentile)
 Average daily word assessments (from sounds taught that day) – 9.3/10

Intervention: Decoding four times per week for 8 weeks.

Progress monitoring with R-CBM

Week	1	2	3	4	5	6	7	8	SLOPE
Score	15	18	17	21	20	22	19	21	0.72619
